- Pos Terminal Messaging
- Separate Activity Log Window

Ideal Point of Sale Software

Since 1985, we have been developing stock control solutions for hotels and clubs. Our first stock control package was Ideal Retail Manager and, with over 500 packages sold before the year 2000, this was the beginning of our company gaining important industry knowledge in the development of successful and proven stock control software. We have been involved in developing key stock control features throughout our early years with Sharp Cash Registers, and now, with Ideal POS System, we have incorporated all the necessary tools into one package to manage your stock (from small single site operators to larger multi-location businesses).

Integrated EFTPOS

EFTPOS terminals can be interfaced directly to Ideal POS System to eliminate operator mistakes and improve speed of service. Using PC EFTPOS you can connect a single terminal or multi-terminals on a network all sharing the one modem. When customers choose to pay by EFTPOS, simply select an EFTPOS tender to finalise the sale and PC EFTPOS software will complete the process and print the receipts. A cash-out question can be enabled for businesses who offer this facility.

MYOB Interface

Send reconciled banking totals and supplier purchase data seamlessly to MYOB Accounting Software via a direct ODBC Database Connection. General Ledger accounts in MYOB are linked to Sale and Purchase Categories in Ideal POS System, along with other POS Functions.

The Idealpos KS-150 touch screen terminal is a perfect choice for the modern retailer. With a choice of Yellow, Black, Red or White Piano Finish Bezel, you can customize to its look to suit your business

'Live' Stock control

By collecting sales data 'live', you can produce reports without having to wait overnight to collect the information from your terminals. You can quickly produce sales reports based on sales categories, departments and/or individual items. Trend reports on departments and items are available, along with hourly sales, weekly sales, your best and worst sellers, items sold in promotions; the list goes on.
